AB - J03095109 Material contains a transglutaminase modified with a water-soluble substance(s).

- Specifically, the transglutaminase is obtd., e.g., from livers, blood serum, blood platelets, and epidermis of guinea pigs, rats, pigs, cattle, and sheep. Microorganism-originated transglutaminases are also used. The water-soluble substances for the modification include polyethylene glycol, ethylene glycol, propylene glycol, glycerine, PVA, glucose, sucrose, fructose, alginic acid, CMC, starch and hydroxypropyl cellulose. The ratio for the modification is pref. 0.2-50 pts. wt. of water-soluble substance(s) to 1 pt. wt. of transglutaminases. The water-soluble substances are bonded to transglutaminases, e.g., by bonding between OH or NH2 gp. and cyanuryl chloride or glutaraldehyde.
- USE/ADVANTAGE - Material is safe to the skin and stable, without odourising or discolouring, and imparts smoothness, wetness, glossiness, elasticity and softness.
- (Dwg.0/0)

IW - HAIR COSMETIC MATERIAL IMPROVE WATER RETAIN SOFT CONTAIN TRANS GLUTAMINASE MODIFIED WATER SOLUBLE SUBSTANCE POLYETHYLENE GLYCOL

IKW - HAIR COSMETIC MATERIAL IMPROVE WATER RETAIN SOFT CONTAIN TRANS GLUTAMINASE MODIFIED WATER SOLUBLE SUBSTANCE POLYETHYLENE GLYCOL
